

# PEN-300:

## BENEFITS OF THE ALL-NEW **EVASION TECHNIQUES AND BREACHING DEFENSES** COURSE FROM OFFENSIVE SECURITY

### Continuation of PWK

We set a strong foundation with our industry-leading Penetration Testing with Kali Linux (PWK) course, and are building upon that knowledge with this advanced pentesting training course.

### Deeper topics

PEN-300 digs even deeper than PWK (PEN-200) into pentesting tools and methodologies on topics such as client side attacks, antivirus evasion, and process injection and migration.

### Prepares students for advanced field work

After completing PEN-300 and passing the Offensive Security Experienced Penetration Tester (OSEP) certification exam, students will be prepared to take on more advanced field work. They will have the knowledge to bypass defenses, as well as how to remain undetected while performing attacks.
